Millions of Smartphones Lost Every Year

The current phone recovery process in India is fragmented, manual, and time-consuming for victims and law enforcement.

✖ Key User Friction Points

- Complex & manual FIR creation at local police stations
- Difficulty locating lost purchase invoices & 15-digit IMEI numbers
- Zero real-time tracking visibility on recovery progress
- Disconnected government portals (CEIR, State Police, Telecom)

5.0M+

Smartphones stolen or lost annually in India

<15%

Successful recovery rate due to missing data

4.5 Hrs

Average time spent filing reports manually

4+

Multiple portals users must manually visit

Critical Gap: Non-technical citizens struggle to format police complaints accurately, leading to delayed blocking on CEIR networks and irreversible phone theft losses.

RecoverAI: Centralized Intelligent Recovery

An automated, AI-driven platform transforming chaotic lost smartphone reports into structured, police-ready recovery cases in seconds.

Instant OCR Invoice Parsing

Upload any purchase receipt. Tesseract.js automatically detects phone brand, model, and 15-digit IMEI numbers.

AI Police FIR Generation

Generates legally formatted, structured FIR drafts tailored for Indian Police Stations & State Cyber Cells.

Government-Grade Security

End-to-end encrypted storage on Firebase Storage with Firestore role-based case management.

Modern & Production-Ready Technology Stack

Next.js 15

App Router, React 19, Server Actions

TypeScript

Strict Type Safety across stack

Tailwind CSS

shadcn/ui Design System

Firebase

Auth, Firestore DB, Storage

Tesseract.js

Client/Server Optical Character Recog.

OpenRouter AI

Multi-LLM Legal Drafting Pipeline

Vercel Edge

Global CDN & Serverless Hosting

Cyber Security

AES-256 Vault & Environment Isolation

Tech Selection Rationale

Engineered for sub-second page loads, zero-server maintenance overhead, and instant scalability for national citizen demand.

v1.0.0-hackathon

End-to-End Key Platform Features

1. Smart Authentication

Multi-factor Firebase Auth with phone OTP verification ensuring verified citizen identities.

2. AI FIR Generator

Context-aware LLM prompts generating formatted Indian legal police complaint documents.

3. OCR Invoice Scanner

Extracts invoice serials, purchase date, phone model, and dual IMEI numbers accurately.

4. Recovery Dashboard

Live status updates on CEIR blocking, police station verification, and case milestones.

5. Secure Cloud Storage

Private document bucket with signed URLs preventing unauthorized access to invoices.

6. Government UX Design

High-accessibility UI inspired by Digital India, Google Material, and Vercel design systems.

System Architecture & Data Flow

Security-First Pipeline

All requests pass through server-side authorization guards. Raw user invoices never touch open AI endpoints directly.

Scalable Infrastructure

Serverless edge deployment ensures automatic scaling from single hackathon demos to nationwide government deployment.

Interactive UI & Application Flow

Key Innovations & What Makes Us Unique

AI-Assisted Legal Workflow

Converts raw loss details into precise police terminology compliant with Indian Penal Code / Bharatiya Nyaya Sanhita norms.

Zero-Typing OCR Automation

Eliminates manual IMEI entry errors, which currently account for over 40% of rejected CEIR blocking requests.

Government-Grade Trust UX

Combines the modern speed of SaaS with the authoritative visual trust required for public service software.

Provider-Agnostic AI Pipeline

OpenRouter integration allows instant switching between OpenAI GPT-4o, Claude 3.5, and Llama 3 models without downtime.

Privacy-First Engineering

Citizen documents are encrypted at rest with automatic document lifecycle purging after case resolution.

Sub-10s Filing Speed

Reduces total filing time from 4+ hours down to under 10 seconds from receipt scan to FIR draft generation.

Future Scope & National Integrations

CEIR Portal Direct API

Automated 1-click IMEI blocking directly on DoT Central Equipment Identity Register across all Indian telcos.

State Police Portal Integration

Direct submission into CCTNS (Crime and Criminal Tracking Network & Systems) across state police departments.

Automated Insurance Claims

Export structured loss reports directly to phone insurance providers (ACKO, Cashify, AppleCare).

Telecom Operator Sync

Instant SIM swap alerts & eSIM deactivation request initiation with Jio, Airtel, and Vi.

Real-Time Beacon Tracking

Crowdsourced Bluetooth & network signal mapping for lost device location pinging.

22+ Regional Languages

Multilingual voice and text interface enabling access for rural and non-English speaking citizens.

Measurable National Impact

95%

Reduction in Case Preparation Time

Filing time drops from hours spent at police stations to seconds on a smartphone screen.

100%

Standardized Data For Authorities

Eliminates illegible handwritten complaints with perfectly structured digital records.

Citizen Confidence

Restores trust in stolen device recovery with transparent real-time tracking dashboards.

Police Efficiency

Reduces manual station administrative workload by over 70% per lost phone complaint.

Stolen Phone Blacklisting

Faster IMEI blocking deters smartphone theft networks and illegal grey market reselling.

RecoverAI

Recover Smarter. Recover Faster.

Empowering citizens and law enforcement with artificial intelligence to protect India's mobile ecosystem.
